

LUMEN STAGE

From decisions to the frame

Define, block, shape, frame and verify one
complete shoot.

Five-stage workflow

Mobile and full mode use the same decision language.

Define

Define the intended image before tuning individual controls.

CHECK

- Choose reference lighting or a visual style
- Start from an authored setup
- Confirm the Blueprint target

Block

Arrange the subject, lights, modifiers and camera as one spatial system.

CHECK

- Studio reveals height and occlusion
- Top view reveals angle and distance
- Use Move, Rotate and Aim

Shape

Same-framing comparison: Softer Light becomes a visible source change.

Begin with an outcome button

Compare source size and shadow edge

Use advanced controls only for exact values

Frame

Finish composition with lens, aspect ratio and orientation.

CHECK

- Choose aspect and orientation
- Combine focal length with camera position
- Verify focus, depth and safe area

Verify

Remove exposure and ratio problems before delivery.

CHECK

- Check exposure and highlight clipping
- Compare key, fill and background
- Move to imaging only after it passes

Shoot Blueprint

The left rail keeps the working brief readable throughout the shoot.

CHECK

- Project and SHOT identity
- Shot count, aspect and focal length
- Active light roles or visual target

Selected Decision

The right rail presents intent and impact before exact parameters.

CHECK

- Follows the selected light
- Softer, deeper or lock to face
- Reports power, distance and aim

Finish and export

Open metering over the same stage and clear technical issues before export.

CHECK

- Judge the normal image first
- Return after correcting exposure
- Save, back up and create a setup sheet
